- Operational improvements and financial savings
- Supplied with legs and coupling + 30 day supply of micro-filters

Model Dimensions

Height: 27cm

Width: 33cm

Depth: 22cm

Short Form Specification

Model: The fine particle strainer is a low maintenance system that catches and removes coffee and food particles before they pass into the drainage system. The reduction of particles entering the drainage system means dramatically reduced; blockages, odours, corrosion and expensive reactive plumbing call out charges.
